Painting Conservation

What can the Modular Cleaning Program do for you?

WHY

This workshop is not the full Modular Cleaning Course created by the incredible Chris Stravroudis, rather it is a one day workshop that will serve to introduce/refresh you to the core concepts of the MCP.

Perhaps you took the MCP workshop years ago got home and said how do I proceed...Perhaps you always wanted to take the MCP workshop and you were not sure if it could be helpful...Perhaps you are terrified of Chemistry and some unhelpful person told you not to take the MCP...

WHO

I am a painting conservator in private practice. I was an early adaptor of the MCP I took the first workshop in the summer of 2005 at ICA. Since then I have been using MCP in my practice. As an early adaptor I spent a lot of time pestering Chris with questions about treatments and we became friends. I have been a teaching/lab assistant for two MCP workshops in 2009 and 2016. I am happy to share what I have learned with other conservators.

WHAT

This one-day workshop will be divided into two sections. The morning will focus on an introduction to the concepts of the MCP and skills using the software data base. The afternoon session will be a hands-on session on how to mix solutions and how to use the MCP to create effective cleaning tests.

HOMEWORK

I will be sending out a survey to workshop participants so that I can gauge content to best serve the group. Also I will be sending a link to download the MCP and a request for some materials for local folks to bring. (For those of you who don't have to fight TSA on your way to the conference)
